Q: Moving the coefficients after scaling to equal 1, why is the step not working? I'm doing linear regression with data that has a range for the x-values, 0 to 100. To adjust for this, I've scaled the data, so that the x-values range from 1 to 100. However, when I scale the data and try to move the coefficients after the scaling, I get values outside of my range. My steps are as follows: $df[['x']] = df[['x']].apply(\lambda x: 1./x)$ $X = df[['x']]$ $X1 = X[:, -1]$ #These are my coefficients before scaling, i.e. b0 etc $scaled_coeffs = np.$
